nanocoast®

About Nanocoast

Nanocoast is a range of stainless steel hardware for exposed and extreme locations.

Manufactured in high grade stainless steel for superior corrosion resistance, our Nanocoast hardware range comes with an industry-leading lifetime guarantee. The products will not pit, rust or corrode regardless of the environment.

Each pull handle is made from 1.5mm thick stainless steel, and made it part of the UAP Nanocoast range.

There are 3 different fixing methods available – hidden fix, bolt through and back to back. Due to the fixing methods, customers also have the option of sending the door to the site without the pull handle on, this will prevent damage in transit or on site.

STRAIGHT SLIM PULL HANDLES

The UAP Straight Slim Pull Handles uses a 32mm bar against a 32mm straight bar which create a more sleek and stylish product. The bolt through fixing gives a neater finish and as high grade stainless steel is used, the product will not rust and so there will be no leakage if it rains. Each straight pull handle comes with an Allen Key and 2 Allen Bolts on each of the up-stands. The bolts are all made from high grade stainless steel. All the pull handles have two fixing points with an individual plate on each.

- Made from 1.5Mm 316 grade stainless steel
- 32mm diameter for sturdier construction
- Salt spray tested to ASTM B117 for 2,000 hours
- Each handle comes with a LIFETIME coating guarantee!
- 3 fixing methods available – hidden fix, bolt through and back to back

PULL HANDLE DESIGNER RANGE

DESIGNER RANGE PULL HANDLES

nanocoast®

The Designer Pull Handles range is made from thick high grade stainless steel and features a stylish design with shiny mirror polished elements. It has a diameter of 38mm for sturdier construction. This range is part of the Nanocoast range, coming with a LIFETIME coating guarantee. The bolt through fixing gives a neater finish and as high grade Stainless Steel is used, the product will not rust and so there will be no leakage if it rains. The handles also comes with an Allen Key and 2 Allen Bolts on each of the up-stands, as well as two fixing points with an individual plate on each.

FIXING METHODS

What makes the pull handle really stand out is the 3 different fixing methods available – hidden fix, bolt through and back to back fix. Due to the fixing methods, customers also have the option of sending the door to the site without the pull handle on, this will prevent damage in transit or on site. The door will simply be sent with the fixings on and the installation would be completed on site.

Hidden Fixings

The pull handle comes with two fixing points each with an individual plate. These are fitted to wooden and timber doors using three screws. The pull handle then attaches to the plates and is secured with the Allen bolts. The internal fixings are not visible on the door!

Bolt Through

The bolt through method uses a brass thread reducer; this is included in one of the two accessory kits. The brass thread reducer has a 1.5mm thread on the outside which will thread into the upstand. On the internal of the reducer is an N8, this is an 8mm bolt through which provides an ideal position for an internal bolt to fit through. The two Allen bolts give extra protection against vibrations that may take effect on a main road causing bolts to come undone. With the Allen bolts this will not happen!

Back to back

We have developed a system which is incredibly easy to use and which will reduce fitting times to just seconds. Included in the second accessory kit are two plates which have holes all the way through. Once the plate is fitted on the inside of the door, the bolt can be pushed through the plate and screwed into the brass reducer. The internal pull handle would then be fitted using the hidden fix system. This offers an extremely strong back to back fixing method!

HIGH SECURITY ESCUTCHEON

Reach TS 007:2012 3* Standards when you combine with the Zero Lift 1* Cylinder

Bevelled edge makes gripping more difficult to pull it off

Suitable for all composite doors

Contemporary design with a smooth finish

Tested to ISO 9227:2012(EN)

Part of the Nanocoast range – made from Stainless Steel

Tested to EN 1670:2007 Grade 3 High Corrosion Resistance

High tensile strength fixing bolts

1* Cylinder Solution

The escutcheons are ideal to be combined with the ZeroLift 1* Kitemarked high security cylinder. Combining the Nanocoast high security escutcheon with the ZeroLift 1* cylinders will give you a professional security solution.

We have also developed a specially sized 30/35 (65mm) cylinder which is the perfect size cylinder to use with the Nanocoast high security escutcheons!

Created in accordance with the British Standards Kitemark, and also awarded the "Secured by Design" approval by the Association of Police Officers, the high quality 6 pin double Kitemarked euro cylinder can be fitted to any door in order to ward off criminals that attempt to use the most popular break-in methods.
