Resistant to corrosion
- BSEN1670 Grade 4
(240 hours)

High Security Multipoint Lock

This high-security multi-point lock system is engineered to provide exceptional protection and versatility for modern PVCu doors. With multiple lock configurations available, it adapts seamlessly to one-piece or individual keep sets, ensuring a tailored fit for various installations. Designed for maximum security, it features three opposing steel hooks and two anti-lift bolts, offering superior resistance against forced entry. The inclusion of roller cam options, with choices between two or four roller cams, ensures enhanced compression for smooth and secure door operation. Additionally, the easily reversible latch allows for quick adjustments, making installation hassle-free while maintaining compliance with the Secured by Design Police Preferred Specification. Fully tested to PAS24 standards, this lock guarantees superior protection against potential break-ins and is equipped with an anti-drill plate for added security. Designed with both convenience and durability in mind, this lock system boasts versatile spindle configurations, including dual, single, or split spindle options to meet various operational needs. The latch hold-back snib, conveniently located on the lock faceplate, further enhances usability. For flexible installation, the lock features extendable top and bottom sections, making it adaptable to different door sizes.

Built to withstand harsh conditions, it is BSEN1670 Grade 4 certified, providing 240-hour corrosion resistance for long-term durability. The silver passivated faceplates not only add to its longevity but also ensure a sleek, modern appearance. Backed by a 10-year mechanical guarantee, this locking system delivers long-lasting performance, making it the ideal choice for enhanced security and reliability in PVCu door installations.
