

UAP Aluminium 12 inch Letterplate

— Made from aluminium

— Designed for 40-80mm for wooden and composite doors

— Conforms to many standards and testing requirements including aspects of BS EN 13724:2013

— Blind bolts to the exterior of the letter plate prevents the outer frame being unscrewed from the door externally

What is the UAP All Aluminium 12 inch Letterplate?

The cavity hole dimension to drill into your doors in order to fit the all aluminium 12 inch letterplate is 257mm x 39.75mm.

Each letterplate has the brushes outward facing which acts as a visual deterrent to vandals. As the internal cavity is not easily accessible, it makes it a lot harder to put lit fireworks etc. into the cavity. A feature no other letterplate in the industry has.

Benefits

It is easier for postmen to navigate letters through the brushes, so you won't end up receiving crinkled letters anymore.

The brushes stop draughts at the point of entry, making the letterplate draught-proof.

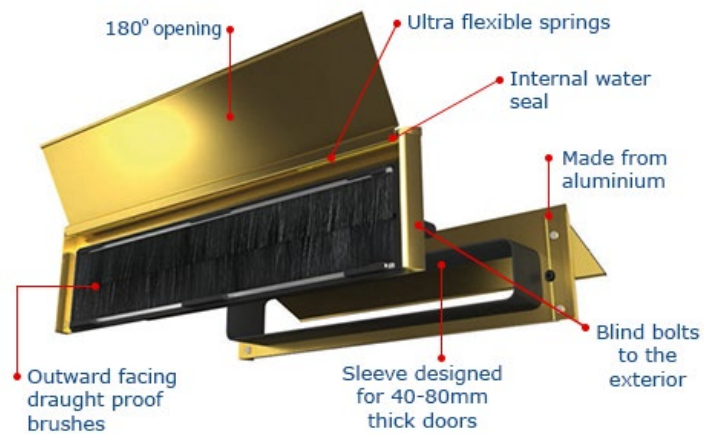

The brushes stop draughts at the point of entry, making the letterplate draught-proof.

Furthermore, each letterplate flap can open to 180 degrees, meaning that it should not snap.

The ultra-flexible springs on this letterplate means that they can withstand thousands of openings without breaking.

Also, an internal water seal also prevents water getting into the door or panel, which stops letters getting wet as they are posted through, and also helps to prevent the flaps from pitting or rusting.

Finish	40-80mm Door Opening	Material Construction	Coating Guarantee
Gold Anodised	FMG1248G	Aluminium	10 Years Colour Fast
Silver Anodised	FMS1248S	Aluminium	10 Years Colour Fast
