What is the Bluetooth Smart Door Handle?

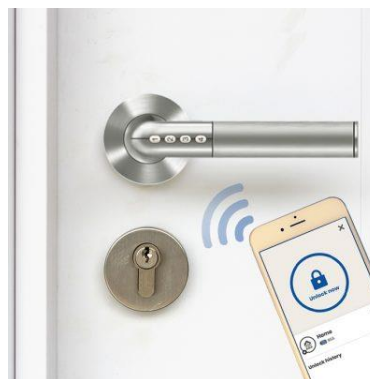

Modern door handle with timeless design enables simple access using Smartphone App and Pin Code. The pin codes and access logins can be easily managed via mobile phone. An additional feature of the app is the access protocol, in which you can see which users have opened the door or pin codes have been registered.

Why choose the Bluetooth Smart Door Handle?

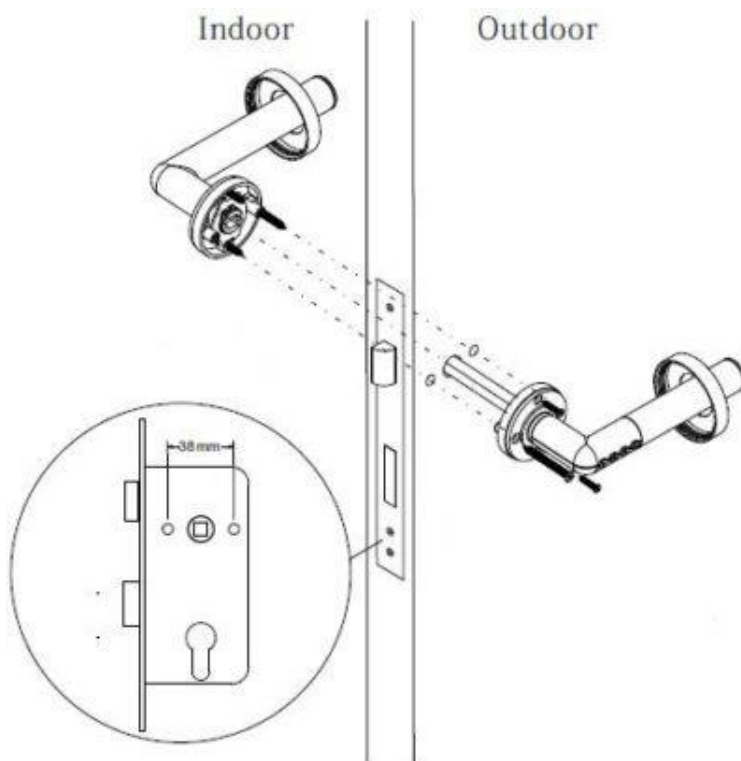

Due to the simple installation and the easy-to-use surface, the door handle is also ideal for retrofitting and for use in offices. With the battery-operated Intelligent Hardware Bluetooth Door Handle with Pin Code you can open and close the door using Bluetooth on your mobile phone or by entering a code directly on the door handle.

Benefits

For installation, the built-in door handle has to be removed, this can be done in 5 minutes with a screwdriver. The simple and quick installation makes it ideal for retrofitting existing doors. The door handle can be adjusted to different door sizes between 38mm and 58mm door leaf thickness. You can register up to 6000 door openings in the smartphone App. A possible emergency opening with an existing key is of course still possible, as the cylinder stays unchanged. Attention! Our door handle is suitable for a door thickness of 38mm to 58mm. Please measure your door leaf thickness.

Product	Code
